### Commentary

The life expectancy of highly educated 65-year-olds has increased in recent years while it has remained the same for 65-year-olds with lower education levels. Over the period 2015 to 2018 inclusive, the life expectancy education gap was over 4 years for women and over 5 years for men. Furthermore, the education gap became wider for men in terms of disability-free life expectancy at 65. Statistics Netherlands (CBS) reports this based on the latest figures.

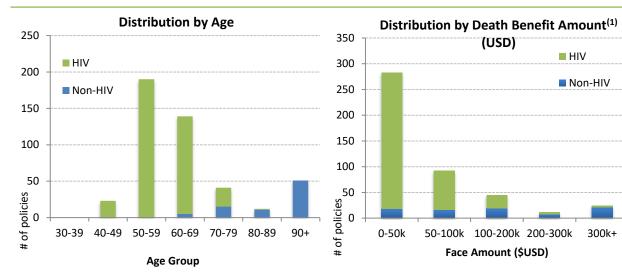

The Share Class is reporting a performance of 8.67% for the month of July. One maturity for a total death benefit of \$ 2.2M in the non-HIV segment this month. The non-HIV insured was the largest exposure in the Share Class.
